FROST Installation manual

Contents

1 Overview of Installing FROST **5**

1.1 Introduction 5

2 Preparing for Installation **7**

2.1 System requirements 7

2.2 Preparing the SQL-server 7

3 Installing FROST server **9**

3.1 Method 1: Binary distribution 9

3.1.1 Redhat RPM 9

3.1.2 Debian DEB 9

3.2 Method 2: Compiling from the sources 9

3.2.1 Setting up the source code 9

3.2.2 Configuring the source tree 9

3.2.3 Compiling the source 9

3.2.4 Installing the compiled binaries 9

3.3 Testing the installation 9

4 Configuring FROST server **11**

4.1 Global FROST server configuration 11

4.2 Filter configuration 11

5 Installing FROST clients **13**

5.1 Unix-client 13

5.2 Windows-client 13

6 Troubleshooting **15**

6.1 blaah 15

A Sample global configuration **17**

B Sample filter configuration **19**

Chapter 1

Overview of Installing FROST

1.1 Introduction

Chapter 2

Preparing for Installation

2.1 System requirements

2.2 Preparing the SQL-server

Chapter 3

Installing FROST server

3.1 Method 1: Binary distribution

3.1.1 Redhat RPM

3.1.2 Debian DEB

3.2 Method 2: Compiling from the sources

3.2.1 Setting up the source code

3.2.2 Configuring the source tree

3.2.3 Compiling the source

3.2.4 Installing the compiled binaries

3.3 Testing the installation

Chapter 4

Configuring FROST server

4.1 Global FROST server configuration

4.2 Filter configuration

Chapter 5

Installing FROST clients

5.1 Unix-client

5.2 Windows-client

Chapter 6

Troubleshooting

6.1 blaah

Appendix A

Sample global configuration

Appendix B

Sample filter configuration
